The prospectus should be read carefully before investing. The Monarch ETFs are distributed by Northern Lights Distributors, LLC, member FINRA/SIPC. Kingsview Wealth Management, LLC and Penserra Capital Management, LLC are not affiliated with Northern Lights Distributors, LLC.

IMPORTANT DISCLOSURES

Past performance does not guarantee future results. The Funds' net asset value and investment return will fluctuate based upon changes in the value of its portfolio securities. There is no assurance that the Funds will achieve their investment objective, and an investment in the Funds is not by itself a complete or balanced investment program. For a complete description of the Funds' principal investment risks please refer to the prospectus.

The Funds seek positive absolute returns. Fund holdings may fluctuate in value in response to the activities of individual companies and general market and economic conditions. While the shares of ETFs are tradable on secondary markets, they may not readily trade in all market conditions and may trade at significant discounts in periods of market stress. ETFs trade like stocks, are subject to investment risk, fluctuate in market value and may trade at prices above or below the ETFs net asset value. Brokerage commissions and ETF expenses will reduce returns. There is no guarantee that the Funds will achieve their objectives.

The underlying ETFs are subject to investment advisory and other expenses, which will be indirectly paid by the Funds. ETFs are subject to issuer, fixed income and risks specific to the fund. The underlying ETFs will invest in fixed income securities, including US Government securities, which are subject to changing financial and interest rate conditions. Issuers may not make principal payments resulting in losses to the Funds. Market conditions could cause these securities to fall in tandem, creating correlation risk.

Equity securities are susceptible to general stock market fluctuations and to volatile increases and decreases in value. The equity securities held by the underlying ETFs may experience sudden, unpredictable drops in value or long periods of decline in value. This may occur because of factors affecting securities markets generally, the equity securities of a particular sector, or a particular company.

The Funds may have significant exposure to a limited number of issuers conducting business in the same sector or group of sectors. Market conditions, interest rates, and economic, regulatory, or financial developments could significantly affect a single sector or a group of sectors, and the securities of companies in that sector or group of sectors could react similarly to these or other developments.

*The **Bloomberg US Aggregate Bond Total Return Index** is an index designed to provide a measure of the performance of the U.S. investment grade bonds market, which includes investment grade U.S. Government bonds, investment grade corporate bonds, mortgage pass through-securities and asset-backed securities that are publicly offered for sale in the United States. The securities in the index must have at least 1 year remaining to maturity. In addition, the securities must be denominated in US dollars and must be fixed rate, nonconvertible, and taxable.*

*The **S&P 500 Total Return Index** is the total return version of the S&P 500 Index which includes the effects of reinvested dividends. The S&P 500 Index is a capitalization-weighted index of 500 stocks designed to measure performance of the broad domestic economy through changes in the aggregate market value of 500 stocks representing all major industries.*

*The **S&P Target Risk Moderate Total Return Index** is a multi-asset class index, corresponding to a moderate risk level. The asset class mix is determined once per year through a process designed to reflect the overall opportunity of the markets represented, adjusted for specific risk levels.*
